1.	'National Model of Criminal Intelligence', International Scientific Research Task, researcher of the particular Scientific Research Task, APZ Bratislava, 2017 – present, VYSK 231/2017 The scientific research task is addressed by commissioning the Ministry of the Interior's Presidium of the Ministry of Health in the field of 'theory and methodology of police sciences as sciences of practical and scientific application and problems of transferring their knowledge to police practice', which is a fundamental investigative theme for the long-term purpose of the scientific work of the Police Academy in Bratislava. The objective of the scientific research task is to provide a methodological basis for the processing of legislative, methodological and tactical proposals and recommendations necessary for the creation of a national criminal intelligence model in the Slovak Republic, based on the European Criminal Intelligence Model and accepting the recommendations of the European Union and Europol. In order to achieve the objective, an analysis of approaches in criminal intelligence and crime detection legislation in selected EU countries has been carried out with a view to recommending to the Presidium of the PA a model that meets the requirements of the European Union. Currently, investigators analyse the strategic level of approach to detecting crime.
